The Public Access Policy states that research papers resulting from NIH funding must be made publically available no later than 12 months after the official date of publication.

Compliance starts by submitting your paper to the NIHMS system. The system generates a NIHMS ID and eventually a PMCID number. Prior to acquiring your PMCID, your paper will be converted to a formatted-version for upload to PMC (PubMed Central).

The new NIH grant annual progress report format (RPPR) requires that an electronic copy of your publications list is generated from MyNCBI/My Bibliography which includes the PMCID number. Any papers without this number will be listed as non-compliant and the NIH will hold up the award until all papers cited on your publications list are "compliant".

**Effective September 1, 2015**, *all peer-reviewed publications* by MSK faculty or employees must:
1. acknowledge the MSK Cancer Center Core Grant in the funding acknowledgements;
2. must be submitted to NIHMS and assigned a PMCID (see below) and;
3. be properly associated with the P30 Core Grant in MyNCBI/My Bibliography.

**MANUSCRIPT SUBMISSION**

- Include the Core Grant; P30 CA008748 in the acknowledgement section of your manuscript. Also include any other federal grants that supported your study.
- If during the journal’s manuscript submission process there is a place asking for federal funds support, again acknowledge the Core Grant.

**UPON ACCEPTANCE OF MANUSCRIPT**

- Start the process to obtain a PMCID number via the NIHMS website for your paper as soon as your paper is accepted. Acquiring the PMCID needs to be completed within 3 months of publication date of your paper. The process will take 1-2 months.
  - **First determine which journal submission method to use:**
    - **Method A** - certain journals will complete the whole process for you providing you indicate to the publisher that your work was NIH funded. While no action is required from you regarding paper’s deposit, you still need to associate the paper in your eRA Commons linked My Bibliography ([https://publicaccess.nih.gov/method-A-BP.htm](https://publicaccess.nih.gov/method-A-BP.htm)).
    - **Method B** - journal will complete the whole process for you for a cost (varies depending on publisher); rarely used due to high cost.
    - **Method C** - usually the corresponding (responsible) author but any of the co-authors on the paper can submit the final peer-reviewed manuscript to NIHMS.
    - **Method D** - the journal publisher will upload the manuscript and any relevant files. The author has to approve the manuscript and file(s) when prompted by an e-mail from NIHMS.
- If a paper is submitted by a non-MSK author, you still have to link the Core Grant to the paper. This can be done directly in [MyNCBI](https://nihms.nih.gov/db/sub.cgi).
